Finally, your dog can stop itching!

Designed to help address common skin and coat concerns with a deeper, gentler clean. When a pet is dealing with odor, itching, buildup, or sensitive skin, the issue is **not always sitting on the surface**.

PERSISTENT ODOR

Bad odor is often a sign that buildup is sitting deeper in the skin and follicles.

THERA-CLEAN® helps lift away trapped debris that traditional washing may leave behind, supporting a cleaner skin environment and a fresher-smelling coat.

SENSITIVE OR REACTIVE SKIN

Some pets do not respond well to harsh soaps, surfactants, or aggressive scrubbing.

THERA-CLEAN® offers a gentler, skin-first approach that helps clean deeply while being more supportive of sensitive skin.

ONGOING SKIN AND COAT MAINTENANCE

Can also be used as part of a proactive care routine to help support cleaner skin, better comfort, and healthier coat maintenance over time.

THERA-CLEAN® is not only for pets with active skin issues.

THERA-CLEAN® helps support healthier skin by cleaning deeper, where debris and buildup can continue to cause discomfort.

ITCHING AND SCRATCHING

When the skin is not fully cleared of buildup and irritants, discomfort can continue.

THERA-CLEAN® helps support a cleaner, calmer skin environment for pets prone to itching, scratching, and ongoing irritation.

RECURRING BUILDUP

A pet can look clean on the outside while buildup continues to collect below the surface.

THERA-CLEAN® uses patented microbubble technology to help clean into pores and follicles, not only across the coat.

SUPPORT FOR EXISTING CARE ROUTINES

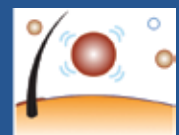

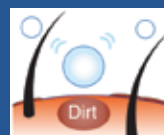

A strong complement to ongoing skin and coat care.

THERA-CLEAN® helps create a cleaner starting point for pets already following veterinary or grooming skin protocols.

Why Pet Parents
and Professionals Choose
THERA-CLEAN®

- ✓ Deeper clean
- ✓ Gentle on sensitive skin
- ✓ No harsh scrubbing
- ✓ Helps support healthier skin from the surface down

Better skin support starts
with a better clean .

THERA-CLEAN® microbubbles wrap up the dirt by surface tension and strip it off from the skin.

Traditional shampoos clean the surface.

THERA-CLEAN® cleans deeper: down to where odor, buildup and irritation can begin.

Not every skin issue starts on the coat.

In many cases, odor, buildup and irritation can begin deeper in the pores and follicles. **A surface-level wash is not always enough.**

TRADITIONAL SHAMPOO

Designed for the surface

Traditional shampoo is made to cleanse what sits on the outside of the skin and coat.

Relies on surfactants and friction

Depends on cleansing agents and rubbing to break down dirt and oil.

Harder on sensitive skin

For pets already dealing with irritation, repeated scrubbing can add more stress to compromised skin.

Limited to a more surface-level clean

Helps remove visible dirt but does not create the same deep-cleaning effect inside pores and follicles.

THERA-CLEAN® MICROBUBBLES

Small enough to clean where others cannot

Reaches deeper into pores and follicles, where dirt, oil, and buildup can collect.

Gentler by design

Supports a deeper clean with a skin-first approach instead of relying on aggressive rubbing.

Supports pets with sensitive or problem-prone skin

For pets dealing with odor, buildup, itching, or irritation, a gentler bathing method matters.

Helps create a healthier skin environment

Supports cleaner skin and better comfort by helping lift trapped debris and buildup.

THERA-CLEAN® is designed to go further.

If the issue keeps coming back, it may be **because the clean is stopping at the surface.**

Why Pet Parents
and Professionals Choose
THERA-CLEAN®

- ✓ Helps clean deeper than a standard bath
- ✓ Supports pets with odor, buildup, and irritation
- ✓ Gentle on sensitive skin
- ✓ Creates a cleaner foundation for healthier skin

How THERA-CLEAN® Helps Clean Below the Surface

Microbubbles help reach **deeper** into pores and follicles, where dirt, oil, and buildup can collect.

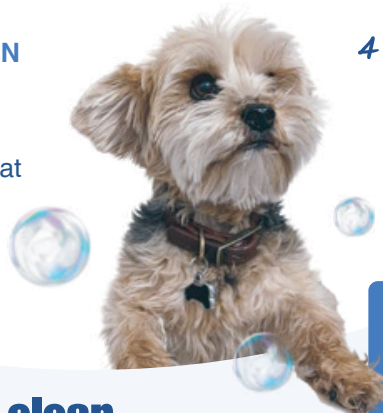

1 BUILDUP COLLECTS BELOW THE SURFACE

Even when a pet looks clean on the outside, dirt, oil, and debris can remain **trapped inside** pores and follicles.

2 THE ENZYME HELPS LOOSEN STUBBORN BUILDUP

A plant and mineral-based enzyme helps soften buildup that is stuck to the skin wall.

3 MICROBUBBLES HELP LIFT IT AWAY

Once the buildup is loosened, microbubbles help **lift and flush it away** from deeper inside the pore.

4 THE SKIN IS LEFT CLEANER

By helping remove **hidden buildup**, THERA-CLEAN® supports a cleaner skin environment and a better foundation for healthier skin.

Because when the clean goes deeper, the skin can be better supported.

WHY SIZE MATTERS

THERA-CLEAN® microbubbles are small enough to help reach into areas **that traditional washing may not fully clean**.

That is what allows them to work **deeper below the surface**, where buildup can continue to cause odor, irritation, and discomfort.

Finally, your dog can stop itching!

THERA-CLEAN® uses **patented microbubble technology** to help clean deep into pores and follicles, where odor, buildup, and irritation can begin.

A pet can look clean on the outside and still struggle with what is happening beneath the surface. Odor, buildup, itching, and irritation often originate **beneath the skin's surface** — where traditional bathing may not effectively penetrate.

NOT JUST A BATH. A DEEPER CLEAN FOR HEALTHIER SKIN.

THERA-CLEAN® was designed to change that. Using patented microbubble technology, it helps clean deep into pores and follicles with a gentler, skin-first approach.

Instead of relying on harsh soaps or aggressive scrubbing, THERA-CLEAN® helps **lift away** debris and buildup that can contribute to ongoing skin discomfort.

WHY PET PARENTS AND PROFESSIONALS CHOOSE THERA-CLEAN®

Provides a deeper clean

Cleans below the surface, where hidden buildup can live

Supports pets with problem-prone skin

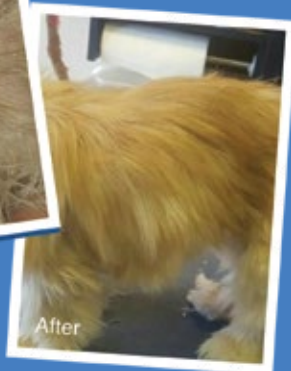

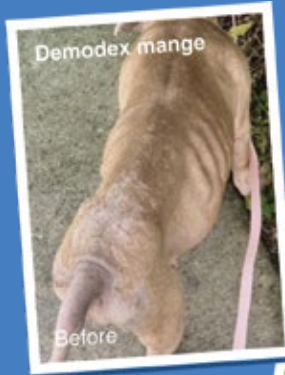

Odor, itching, irritation, or recurring skin buildup

Gentle on skin

Deeper clean without depending on aggressive rubbing

Better foundations for skin health

Supports comfort, hygiene, and ongoing care routines

THERA-CLEAN® IS HELPFUL FOR PETS EXPERIENCING:

- Persistent odor Itching, scratching, or biting
- Sensitive or reactive skin Buildup on skin or coat
- Recurring skin discomfort
- The need for gentler ongoing skin support

THERA-CLEAN® is more than a cosmetic bath.

It is a deeper clean designed to help pets heal their skin irritations and **feel more comfortable in their skin.**

THERA-CLEAN®

MICROBUBBLES

...because CLEAN skin
is HEALTHY skin™

To My Colleagues,

For some of you this may represent a follow-up letter but for many it may be your initial introduction to Thera-Clean and our advanced skin cleaning microbubble technology so a brief overview is necessary.

The basic science involves the formation and delivery of billions of negatively charged bubbles that are primarily less than 1/3 the size of a red blood cell. The dynamics of these bubbles allows them to attract and remove organic matter and debris or to have substances attached to the outer surface for delivery. Globally microbubbles are being researched and used for cleansing, sterilization, anti-cancer drug delivery and other applications

Thera-Clean has focused on developing the most advanced microbubble based skin cleaning systems available. Despite our relative anonymity, we have been utilized successfully by groomers, veterinarians and university based dermatologists for over twelve years. Most recently we have been approached by and started working with, several human medical professionals in various fields.

So why the information package now? Thera-Clean has worked diligently to now operate as an FDA registered company and make FDA compliant products. Under U.S. FDA Veterinary registration for our units as **INDICATION FOR USE: *The Thera-Clean Microbubble System is indicated for use in hydrotherapy to relieve pain and itching and as an aid in the healing process of inflamed and traumatized tissue, and it serves as a setting for removal of contaminated tissue.*** Thank you to our end users for all their help and input and to everyone else, perhaps you would like to hear more.

Thera-Clean's patented microbubble technology provides a previously unavailable level and depth of skin cleaning. The microbubbles enter and remove debris and contaminants from the dermis, hair follicles and pores often the source of recurrent infection. Moreover the reduction in inflammation and itch reduces self-trauma and improved recovery. Further, our microbubbles have been shown to remove pathogenic bacterial biofilm as well as increasing dissolved oxygen content in the cleaning water both of which enhance the effectiveness of antibiotics and skin healing.

Chronic ear infections, pyoderma, folliculitis, atopic allergies even flea allergy dermatitis and mange have all been shown to benefit from the addition of microbubble cleansing to conventional therapy.

We appreciate that most clinics may not have the time or the desire to implement the proper grooming services necessary to provide microbubble baths on an ongoing basis. That is why we have partnered up with the local professional groomer who delivered this letter and the associated additional information packet. They have a Thera-Clean unit and have agreed to work with a limited number of patients of your choosing so you can experience the technology first hand and then decide whether to continue the relationship on a business basis. They will have included their personal information for you to contact them and work out the specifics. Nothing to lose and potentially a great deal to gain.

Yours sincerely,

James Zarowny D.V.M.
